

Cardiologist 1

Job summary

The [Cardiologist](https://100hires.com/cardiologist-job-description.html) is a Licensed/Board Certified professional who plays a key role as part of the clinical operations team, providing direct patient care and assessments, primarily in the ambulatory health care center setting.

The responsibilities of the [Cardiologist](https://100hires.com/cardiologist-job-description.html) include but are not limited to diagnosing and treating various cardiovascular ailments or diseases, such as heart attacks and coronary heart disease, taking a medical history, conducting physical exams, developing a plan of care, providing health education, specialty referrals, and case management referrals, providing follow-up care and applying clear, in-depth documentation through written progress notes and summaries according to standards for quality, service, productivity, and teamwork.

Responsibilities

Provides excellent inpatient and outpatient cardiovascular care as well as, care coordination, echocardiogram reading, population management of market members, and oversight of PCP's cardiovascular skills.

Leads a cardiovascular care team that may include Care Promoters, Echocardiogram/X-ray Technician(s), and in some cases a mid-level (ARNP or PA) dedicated to cardiology depending on the scope and member volume.

Consults with the [Medical Director](https://100hires.com/medical-director-job-description.html) to ensure compliance with guidelines along with participating in risk and quality management programs, clinical meetings, and other programs that maximize and promote clinical value, improve clinical quality, efficiency, physician/patient satisfaction, and advance strategic business objectives.

Manages the care of chronic cardiovascular diseases, e.g. examines patients and runs or orders tests to determine chief complaint and recommends appropriate care or treatment plans as indicated by patient condition and to meet their clinical needs, for a panel of 3,500 to 4,000 patients (with the support of the Care Team and Nurse Practitioner/Physician Assistant).

Assesses patient's ability to withstand the stresses of cardiovascular or other surgeries and helps surgeons or invasive cardiologists in managing strategies for patients, including clearing patients for surgery.

Runs and accurately reads EKG, chest X-rays, and echoes; includes the ability to know which blood tests to order to check for certain types of heart diseases. Orders studies, tests, and other ancillary services as needed.

Limiting external cardiovascular care where high-quality internal care can be appropriately provided to members.

Finds the most appropriate treatment for the patient, i.e. individualized treatment.

Prescribes medication and treatment by patient condition, payer coverage/guidelines, and industry standards.

Reviews PCP requests for external cardiology referrals and participates in delegated utilization authorizations; determine the level of urgency of follow-up, referral/consultation appointments.
