

# Technical Manager 1

## Job summary

The [Technical Manager](https://100hires.com/technical-manager-job-description.html) interacts in a cross-functional way with other departments involved in the launch of new products and improvement/duplication of existing lines and manages a team of maintenance supervisor(s) and process engineers.

## Responsibilities

Oversees Maintenance and Manufacturing Process Implementation activities

Ensures timely resource allocation (mechanics, process engineers, machines) and support in general to the industrialization of new products and continuous improvement of existing products and lines

Is the guarantor of the strict observance of all standards related to machinery and manufacturing processes regarding safety, quality assurance policy, and ergonomics

Ensures that our buildings are well maintained and comply with all OSHA requirements and local regulations

Develops in his team the awareness that all machines and processes must be implemented cost-effectively with a good balance between redundancy (training purpose, flow, rotation of the artisans in the lines...) and machine pooling opportunities if quick changeovers are feasible

## Requirements

Bachelor's Degree in Engineering with an emphasis in Industrial Manufacturing or equivalent

Minimum 8 years of management experience in a manufacturing environment preferred

Strong organizational skills and sense of urgency

Strong analytical and negotiating skills

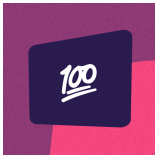

Able to motivate teams, navigate in a changing environment, and lead change at the operational level

Able to build a network to facilitate cooperation, decision-making and anticipate changes

Dedicated to meeting the expectations and requirements of internal and external clients. Uses the information gained from customers to improve services and the work environment. Maintains effective relationships with customers and gains their trust and respect.

Able to create a climate in which people want to do their best. Able to work as a team player and lead a team. Is someone who people like working for and with.

# Technical Manager 2

## Job summary

The [Technical Manager](https://100hires.com/technical-manager-job-description.html) focuses primarily on identifying and implementing energy savings for clients and customers throughout the service territory. Provide energy advice and coordination services of building maintenance, lighting, controls, heating, ventilation, and air conditioning (HVAC) systems for energy efficiency and comfort for the energy efficiency programs.

## Responsibilities

Manage technical operations of the designated Programs

Provide technical support and leadership to Energy Engineers and license holders

Review/Approve prescriptive/custom incentive applications

Practice effective project management skills in leading this energy efficiency program to attain net savings goals

Track progress towards energy savings goals, program metrics, and budget spending to ensure achievement of goals within funding guidelines

Mentor team members in achieving their personal savings goals annually as well as career development

Assist operations team members in the direction of processing energy efficiency projects through the tracking system

Discuss technical elements of energy-consuming equipment in a facility (lighting, HVAC, hot water systems, envelope, integrated design) and how it affects utility consumption and demand, to help build a business case to prioritize recommendations and how they affect savings and first cost

Assist in the training of Engineering department staff

Participate in QA/QC and internal audit activities

Identify and provide documentation of on-site opportunities for energy efficiency in buildings under design and construction; provide follow-up as required to the customers

## Requirements

Bachelor's degree in Engineering from an accredited four-year college or university

3-5 years of management or supervisory experience, including hiring, coaching, performance reviews, and mentoring.

Proficiency in financial management

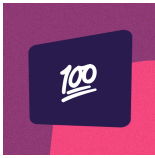

CEM, LEED, AP, and or PE - preferred

2-3 years experience in the energy efficiency industry. A strong understanding of how systems affect energy consumption

3-5 years of engineering experience related to mechanical design, energy modeling, or construction.

Experience in building design, "green" construction, and sustainable design - Preferred

## Technical Manager 3
